

To The Minister of Health
Tony Ryall
The Beehive
New Zealand
Government

15 Oct 2009

Dear Sir

My name is Brian Dodds. I am health practitioner, medical researcher and author of the book FULL REGENERATION: The Ultimate Health Journey. This e-mail is to inform you again of my deep concern about the swine flu vaccinations scheduled to be administered to the New Zealand people in the coming months.

As a concerned New Zealander, I request you, Tony Ryall, our health Minister, to provide us with the evidence of the following in connection with the swine flu vaccines proposed to be administered to the New Zealander people.

1. Provide us, the New Zealander people, of the good track record of all companies involved in making and supplying us with the vaccines.
2. Proof that the vaccines have been independently tested in New Zealand and found not to contain any live or harmful virus material especially any RNA animal type viruses capable of being harmful to animals but unable to cross the species barrier to humans at the time of inoculation.
3. Provide us, the New Zealander people, with a list of all the ingredients and preservatives contained within the vaccines, especially those that may relate to the preservative Thimerosal or any other mercury based compound or metal.

I would also recommend a government survey to be undertaken to monitor the following statistics, in case of a serious pandemic in the future,

1. How many people who were vaccinated at this present time become susceptible to a new viral pandemic if it occurs in the future.
2. How many people who were not, and I repeat WERE NOT vaccinated at this present time, become susceptible to a new viral pandemic if it occurs in the future.

I still have not received the official position to confirm or deny that you have chosen to import 300,000 dosages of the swine flu, and the name of that supplier. These answers are relevant in relation to my Documentary Movie.

I look forward to your reply early.

Yours sincerely

Brian Dodds
